Education

Hack Reactor - Software Engineering Immersive 2020

University of Michigan - B.S. Mechanical Engineering 2009

- Relevant coursework: Computational Programming in C++ and MATLAB
- Sigma Phi Society: Treasurer (2008 - 2009)

Software Engineering

Technologies

Front end: JavaScript (ES5 and ES6), React, HTML, CSS

Back end: Node.js, Express, MongoDB/Mongoose, MySQL/Sequelize, PostgreSQL, RESTful API development

Testing / Deployment: Jest, Enzyme, Mocha, Chai, CircleCI, AWS EC2, Nginx, Artillery.io, Loader.io, New Relic

Developer tools: Git, npm, Webpack, Babel, Agile Methodology, XP Methodology, TDD

Applications

All Day I Dream About Servers - a mockup of adidas' product detail page

- Created a front-end clone of adidas' Reviews section using React
- Generated unique review data for 100 products in MySQL to simulate real-world data
- Designed server-side data processing structure to produce a lightweight client that only loads data necessary to render the page
- Utilized service-oriented architecture, built a proxy server to merge four microservices into one web app

REI Mock System Design

- Redesigned and scaled the back-end of a pre-existing search bar from an REI mock website
- Modelled application data in PostgreSQL, utilized GIN indexing to reduce query time in a data pool of 10M entries (worst-case latency reduced from 31 seconds to 2 seconds)
- Horizontally scaled to 4 EC2 micro instances behind an Nginx load balancer to increase throughput from 750 RPS to 3750 RPS with 71 ms average latency and 0.1% error rate.

GymFinder - a full-stack fitness app built in five days

- Built the navigation bar and search services for a fitness tracker/gym finder web app using React
- Implemented account creation and authentication using Firebase
- Utilized conditional rendering to create a seamless single-page experience

Professional Experience

Safran Cabin | Huntington Beach, CA

Lead Design Engineer 2013 - 2018

Design Engineer 2012 - 2013

- Developed mechanical aspects of aircraft interior structures from concept through production
- Designed modular lavatory ceiling that reduced part count, weight, production time, cost by 40+%
- Facilitated development of engineering core by mentoring colleagues and driving training/process reform

Karma Automotive (d.b.a Fisker Automotive) | Anaheim Hills, CA

Integration Engineer 2011 - 2012

- Provided design solutions to facilitate system integration in a hybrid-electric vehicle
- Defined and monitored occupant packaging through use of SAE measurements and practices
